Assessment Criteria Milestone 1.

Documentation content: It will be deliver …
- Brief summary of the installation process.
- Network configuration files, the process, commands and system response to set up networking.
- Nat Network testing and Host-Only testing.
- List of packages for each one of the profiles will be discussed. Then, all commands to deploy them and the result obtained in each one of the operating systems.

Notes
- It will only be considered the operating systems that appears included in the delivered document.
- Invalid network configuration or incorrect IPs in the documentation or during the review will score 0 points.
- RockyLinux, FreeBSD and Debian are mandatory. If one of them is not correctly configured or reviewed then practice will be suspended
- Documentation out of deadline will not be considered. In this case, practice will be suspended

Review process:
0.- Documentation:
    a) Check the operating system documentation. All previous points have to be included.

1.- Installation:
    a) Check that OS has been installed,
    b) It has a graphic mode
    c) Profiles programs have been installed on it

2.- Network configuration:
    a) Check network configuration,
    b) Guest has internet access
    c) It exists dual ping between Host-Guest and Guest-Host

3.- Versions
    a) OS version
    b) OS kernel / kernel version
    c) Package version (example: the parcel manager)

4.- Package management:
    a) Check OS repositories
    b) Install a package
    c) Remove a package
    d) Find a package
    e) Look for package dependencies
    f) Install a package that is locally stored using the package manager.
